

CSE 2201 – Internet Computing I

Group Project – Web Design and Development

Lecturer: Lenandlar Singh

Submission – Friday June 05 , 2026, 11:59 P.M

Group Size – Minimum 6 – Maximum 8 (6,7,8)

Value: 20% of total course grade

Overall Project Requirement

You are required to identify an opportunity for the development of a website to solve a given information problem within your local context and develop a website to solve this information problem.

Specific Project Tasks

You are required to undertake the following tasks:

- Identify the specific needs of the problem identified to be solved – requirements analysis.
- Design a website to solve the problem identified
- Implement the website solution using client side and an element of server-side technology
- Perform a usability analysis of the implemented solution

Approval of Project

The group leader is responsible for contacting the lecturer with the identified problem and an outline of the solution to gain approval and go ahead for the project,

Group Members and Communication

You will need to submit via email for approval (lenandlar.singh@uog.edu.gy) your group member names, USI, and an identified group leader who will be responsible for all assignment communication and administration.

Assignment Submission

The group leader of each group is required to submit the group's assignment via Moodle. All project files and documents are to be placed in a single folder named using the following naming structure: *lastname1_lastname2_etc_CSE2201Project*. This folder needs to be zipped and uploaded as a single zip file. In particular the following files are expected:

- All project files – HTML, CSS, JavaScript, etc.
- Project write up”
 - A write up of the usability evaluation
 - An outline of the use of AI tools, if this was the case.

Evaluation Criteria

Your tasks will be graded using the following list of criteria:

- Significance of the problem identified and solved
- Design and implementation of the solution
- Evidence of usability analysis of solution

Plagiarism and the Use of AI Tools

It is generally expected that students will undertake their work as a group and not outsource the design and development to AI tools. However, if students resort to using AI tools, they must seek approval from the lecturer. If approval is granted all aspects of the use of AI tools must be clearly identified and documented in the project write up.
